How to Download and Install a Font on Windows 11

Richard Zayzay / 11 hours ago /
2 min read

This post shows students and new users steps to install or remove custom fonts when using Windows 11. Windows allows users to install and manage custom fonts and use them to format their documents. You can download and install new a font in Windows, where it will become available to the system and Office applications.

Fonts come as files which can be installed on Window, and there are many sites on the internet where you can download free fonts, including Google fonts. Typically these fonts are packaged in zipped file. If you download a .zip file, you need to unzip the file before installing.

All fonts are stored in the **C:\Windows\Fonts** folder. You can also add fonts by simply dragging font files from the extracted files folder into this folder. Windows will automatically install them.

Below we'll show you how to download custom fonts on Windows 11 from the internet and install to use them in your applications or documents. It should only take a few clicks to do this in Windows 11.

The new Windows 11 comes with many new features with new user desktop, including centered Start menu and taskbar, rounded corners windows, themes and colors that will make any Windows look and feel modern.

If you're exited about Windows 11, keep reading out posts on it.

To get started with installing fonts on Windows 11, follow the steps below.

# How to install or uninstall fonts on Windows 11

As mentioned above, one can download and install custom fonts from the internet on Windows 11. This process takes a few clicks.

To install a font, go online and download it. For this post, we got our custom font from **fonts.google.com**.
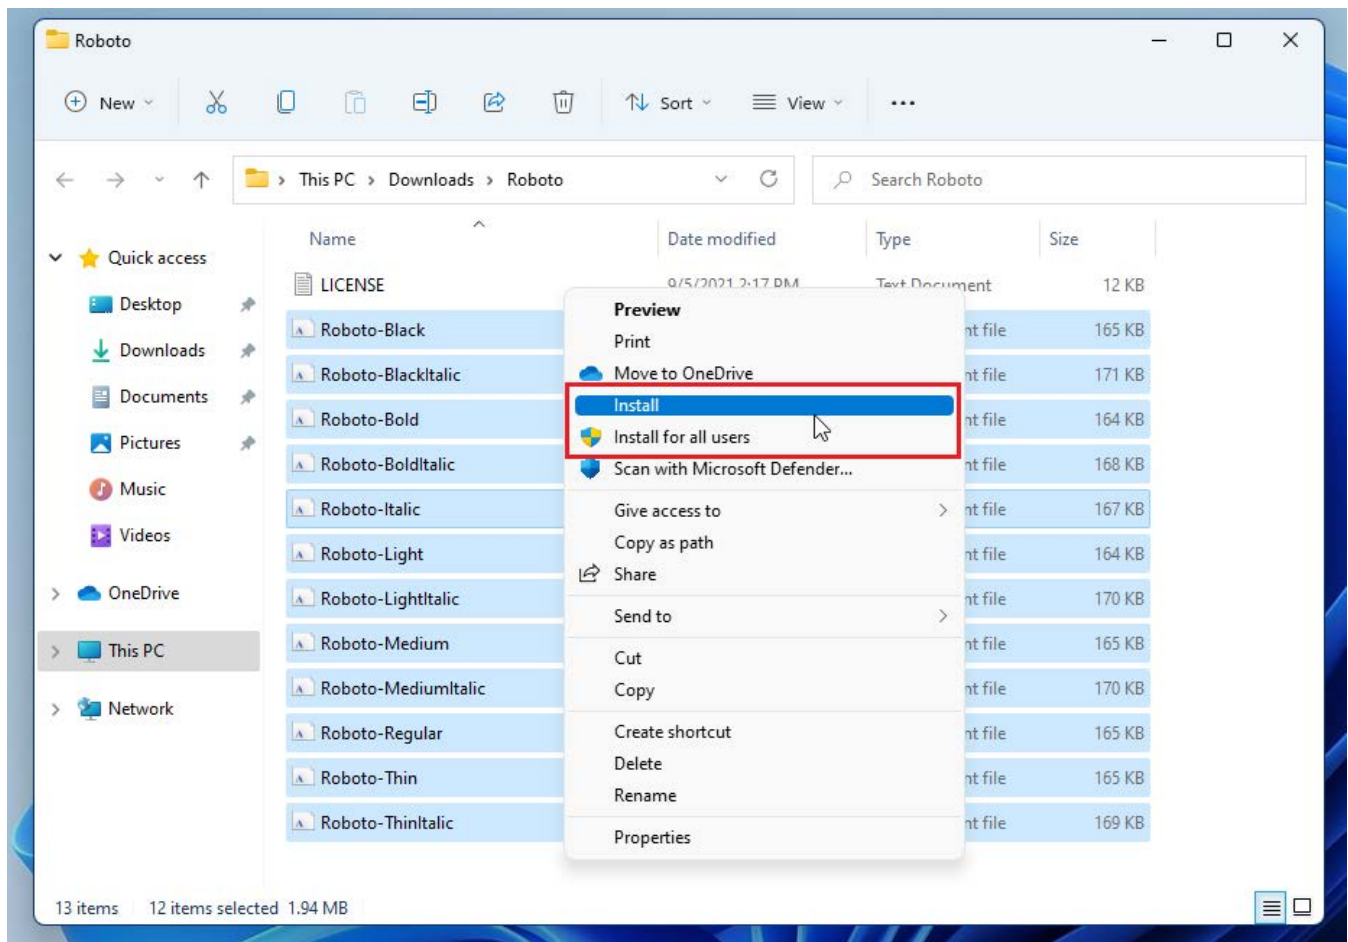

Once the font is downloaded, go to your **Downloads** folder in File Explorer and select the zipped file. Then right-click and select **Extract All...** on the context menu or use the toolbar menu to extract it as highlighted below.
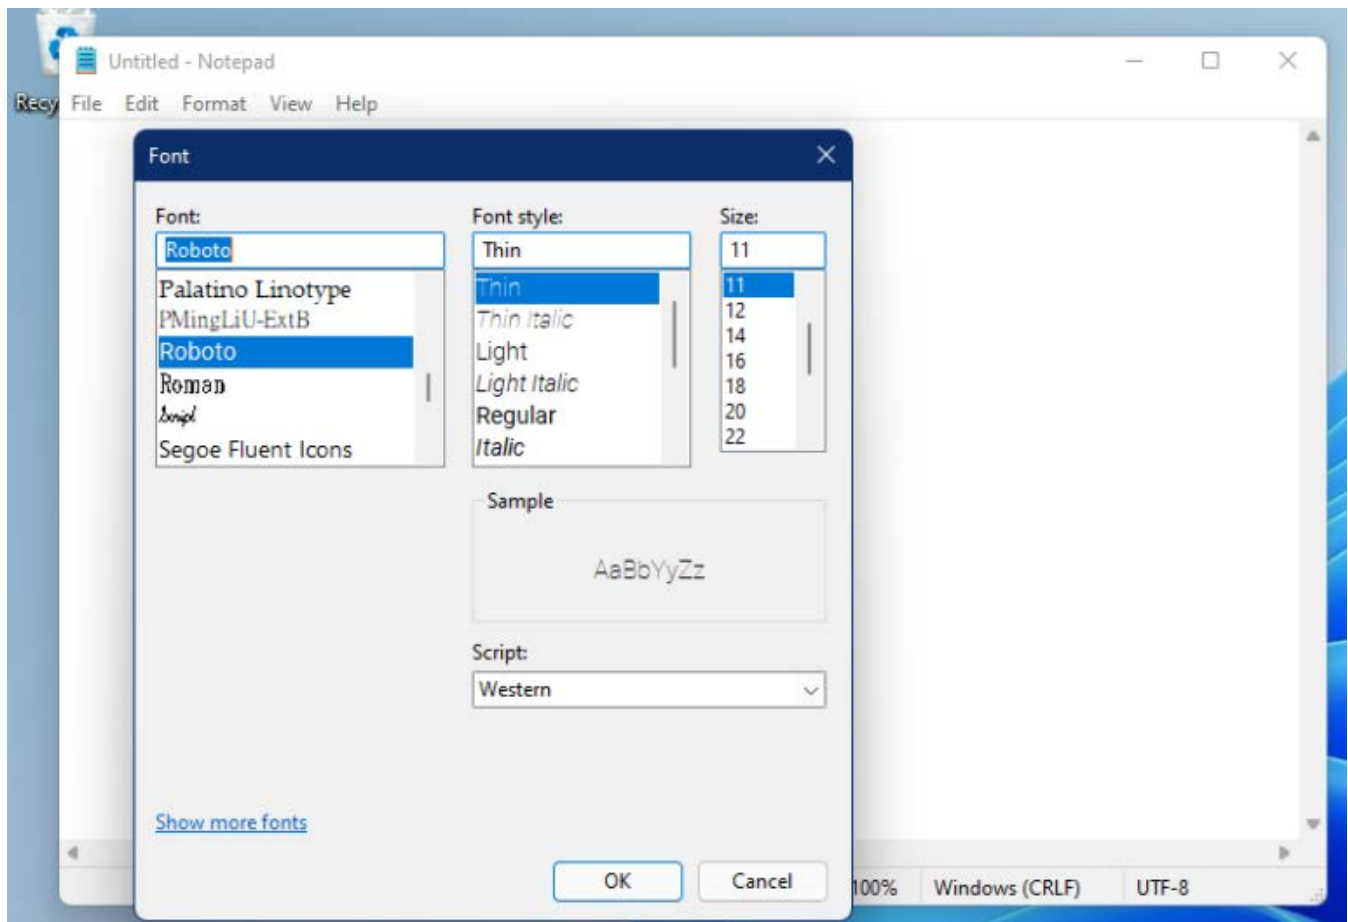

After extracting the zipped file, go into the extracted folder, and simply select all the font files. Then right-click and select **Show more option** on the context menu as shown below.

On the next context menu, choose to **Install** for yourself or **Install for all users** on the system. If you install for yourself, the fonts will only be available to you.

After installing the fonts, they should be available for use in your applications and when you're formatting documents.
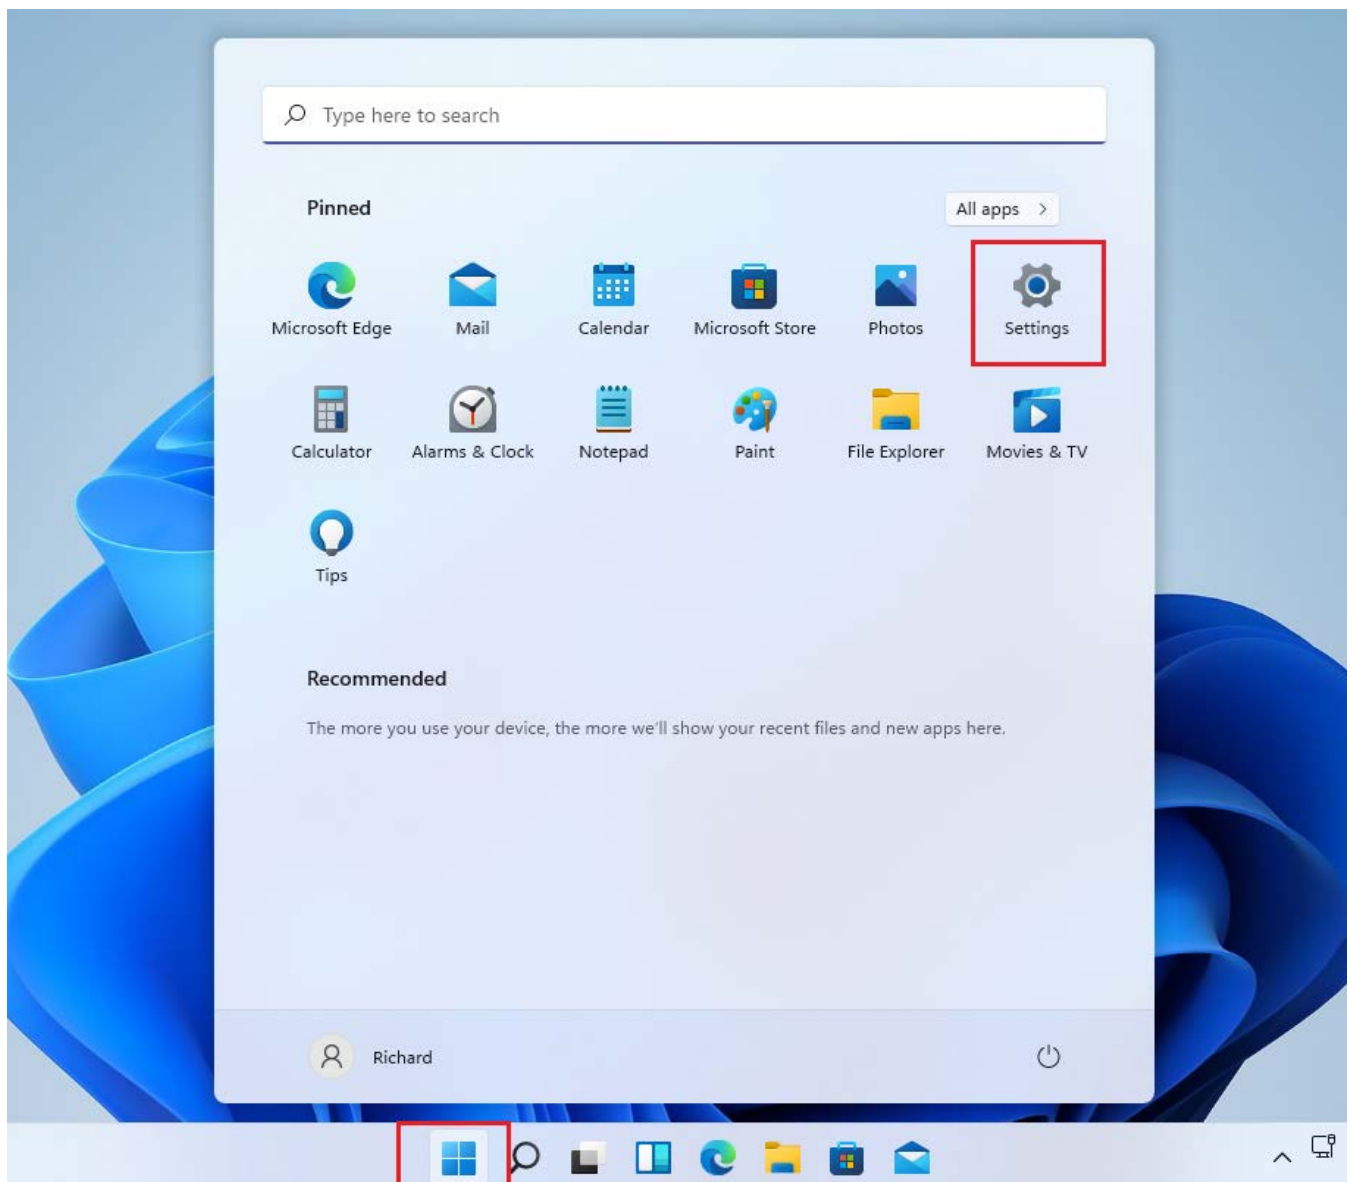

How to manage and delete fonts on Windows 11

Now that you have install a custom font, you can always manage it by going to the System settings.

Windows 11 has a centralized location for majority of its settings. From system configurations to creating new users and updating Windows, all can be done from the `System Settings` pane.
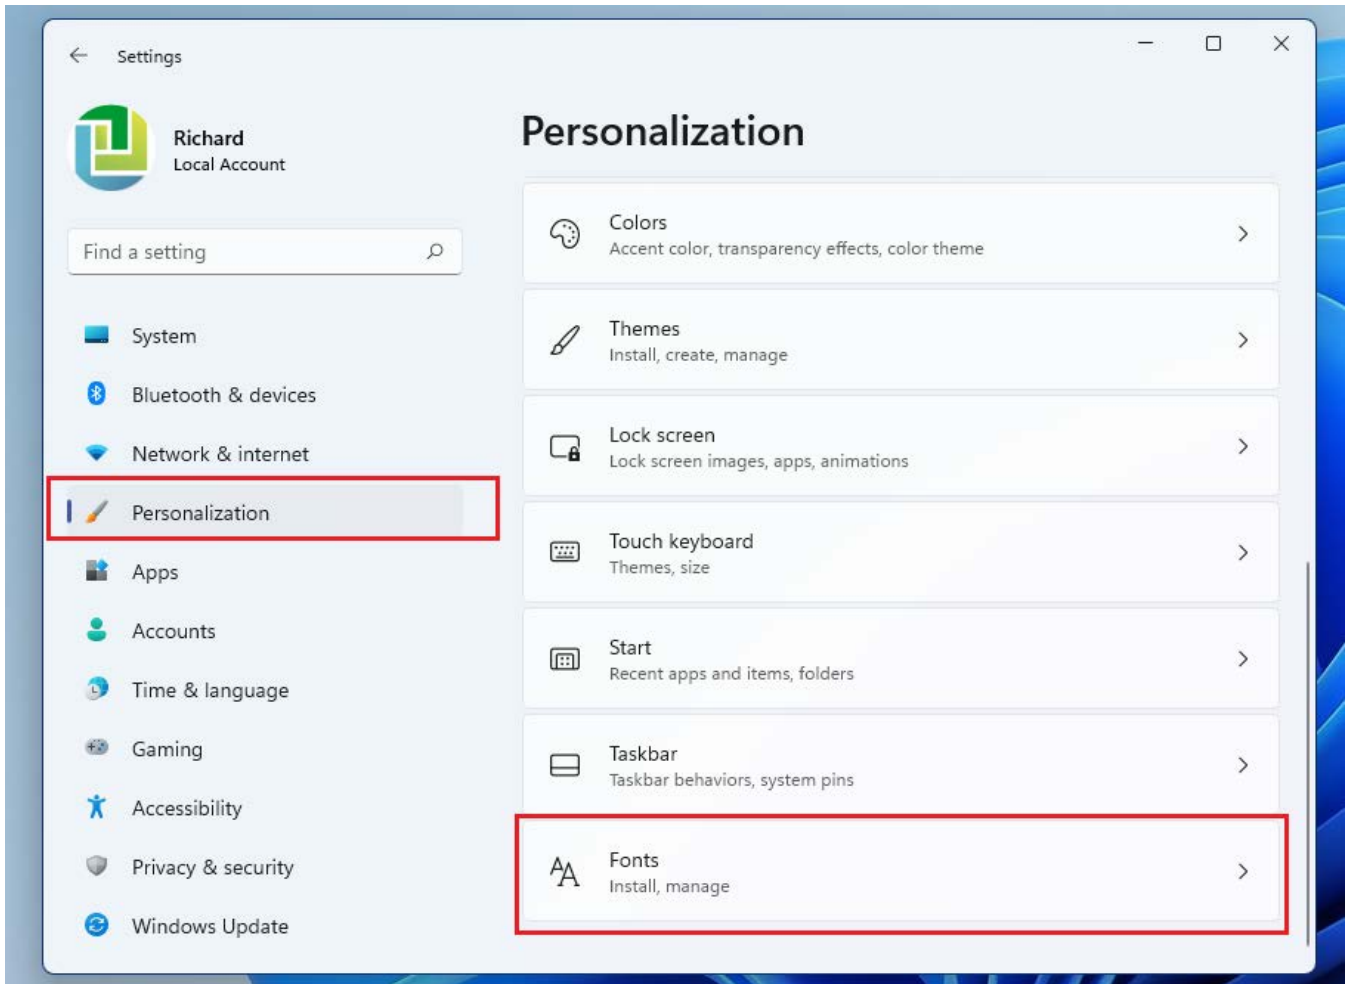

To get to System Settings, you can use the `Windows key + i` shortcut or click on `Start` **==>** `Settings` as shown in the image below:
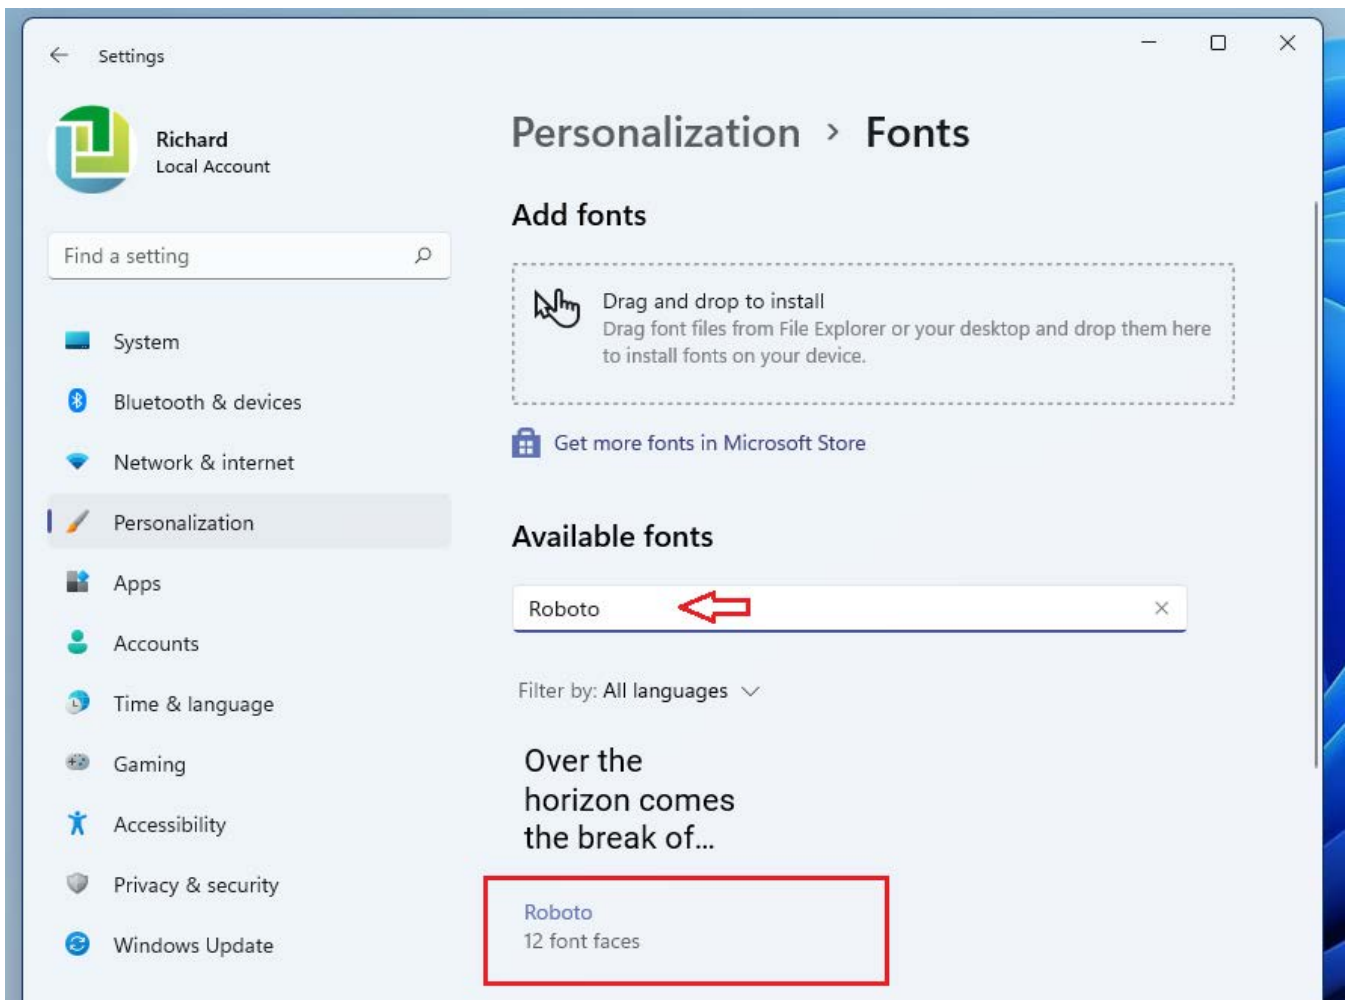

Alternatively, you can use the **search box** on the taskbar and search for **Settings**. Then select to open it.

Windows Settings pane should look similar to the image below. In Windows Settings, click `Personalization`, then select `Fonts` on the right pane of your screen shown in the image below.

On the **Fonts** settings pane, you can search for the fonts that were installed and select.

There you can manage and uninstall the installed fonts.

That should do it!

Conclusion:

This post showed you how to install or uninstall fonts when using Windows 11. If you find any error above or have anything to add, please use our comment form below to do so.
